Installed Plugins

On the left you see the list of **installed plugins** on your system. Both python and cpp plugins are listed. Some plugins come with your QGIS installation while most of them are made available via the plugin repositories.

You can temporarily enable or disable a plugin.To *enable* or *disable* a plugin, click its checkbox or doubleclick its name...

Plugins showing in red are not loaded because there is a problem. Consult the 'Invalid' tab to see more details, or to reinstall or uninstall this plugin.

Get more plugins

Here you see the list of all plugins available in the repositories, but which are **not yet installed**.

Click on the name to see details.

You can change the sorting via the context menu (right click).

A plugin can be downloaded and installed by clicking on it's name, and then click the 'Install plugin' button.

QuickWKT

Quick WKT/WKB viewer, this Qgis Plugin opens a dialog where the user can paste (E)WKT and WKB code and see it on the map. Pasted data are stored in a temporay (memory) layer and are completely lost when the user quits QGIS.

☐ Check for updates on startup

every time QGIS starts

Note: If this function is enabled, QGIS will inform you whenever a new plugin or plugin update is available. Otherwise, fetching repositories will be performed during opening of the Plugin Manager window.

☐ Show also experimental plugins

Note: Experimental plugins are generally unsuitable for production use. These plugins are in early stages of development, and should be considered 'incomplete' or 'proof of concept' tools. QGIS does not recommend installing these plugins unless you intend to use them for testing purposes.
