Εργασ■α με Χαρακτηριστικ■

Τα δεδομ■να GIS ■χουν δ■ο μ■ρη - τα χαρακτηριστικ■ και τις ιδι■τητες. Τα χαρακτηριστικ■ ε■ναι δομημ■να δεδομ■να για κ■θε χαρακτηριστικ■. Αυτ■ το tutorial δε■χνει π■ς να δε■τε τα χαρακτηριστικ■ και να κ■νουμε τα βασικ■ ερωτ■ματα σχετικ■ με τους QGIS.

Επισκ■πηση του ■ργου

Το σ■νολο των δεδομ■νων για αυτ■ το tutorial περι■χει πληροφορ■ες σχετικ■ με κατοικημ■νες περιοχ■ς του κ■σμου. Ο στ■χος ε■ναι να αναζητ■σετε και να βρε■τε ■λες τις πρωτε■ουσες του κ■σμου που ■χουν πληθυσμ■ ■νω των 1.000.000.

Other skills you will learn

- Select features from a layer using expressions.
- Deselect features from a layer using the *Attributes* toolbar.
- Using *Query Builder* to show a subset of features from a layer.

Αποκτ■στε τα δεδομ■να

Natural Earth has a nice Populated Places dataset. Download the simple (less columns) dataset

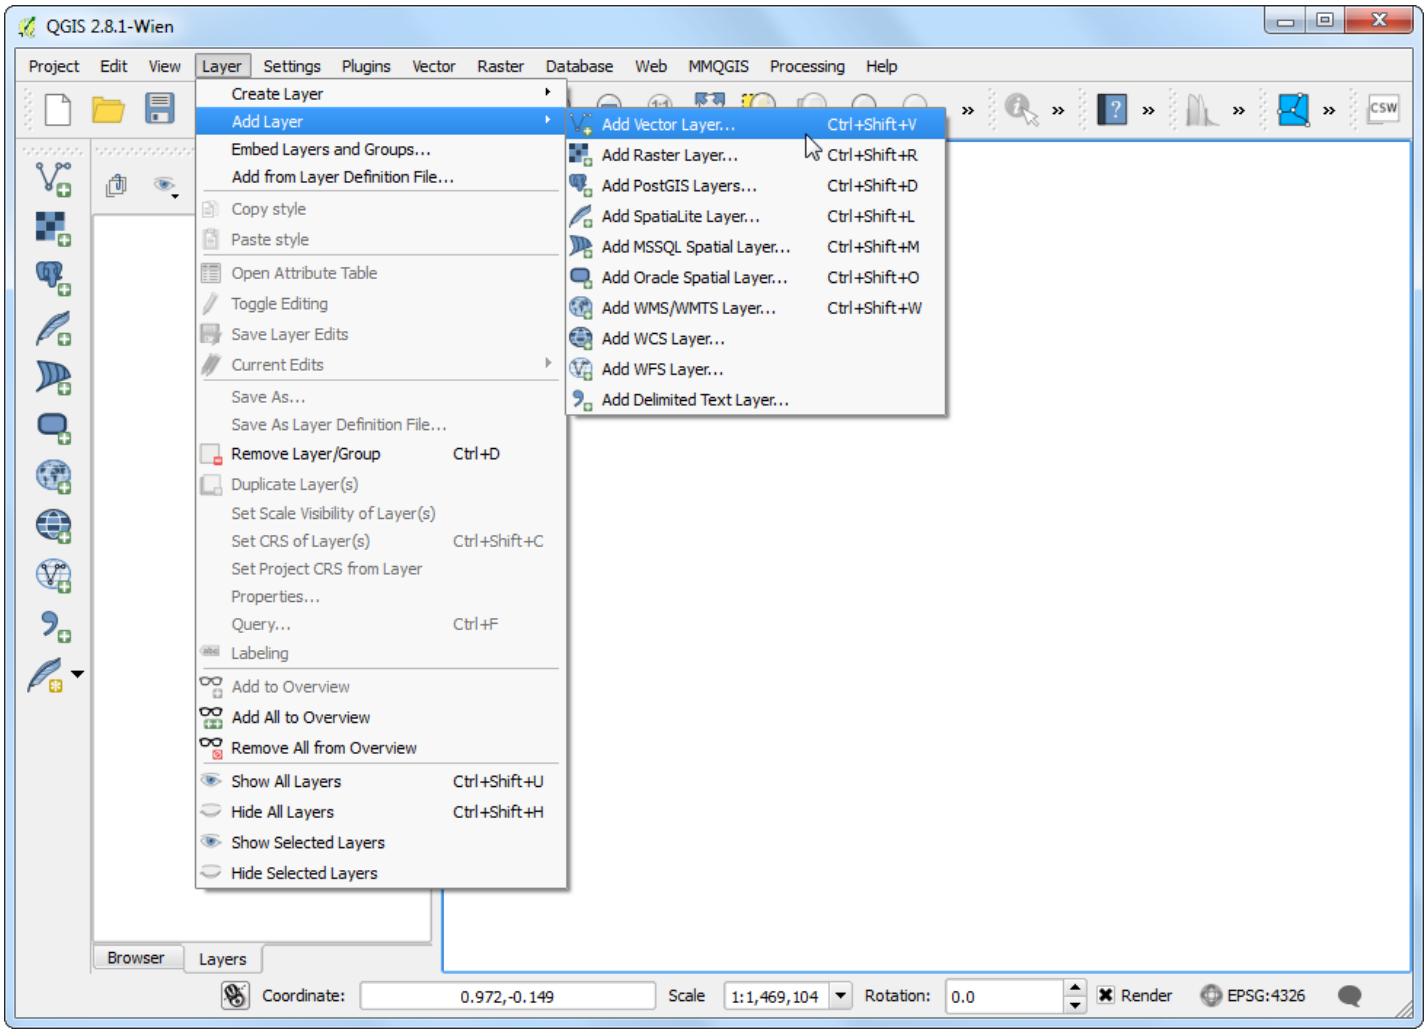
For convenience, you may directly download a copy of datasets from the link below:

ne_10m_populated_places_simple.zip

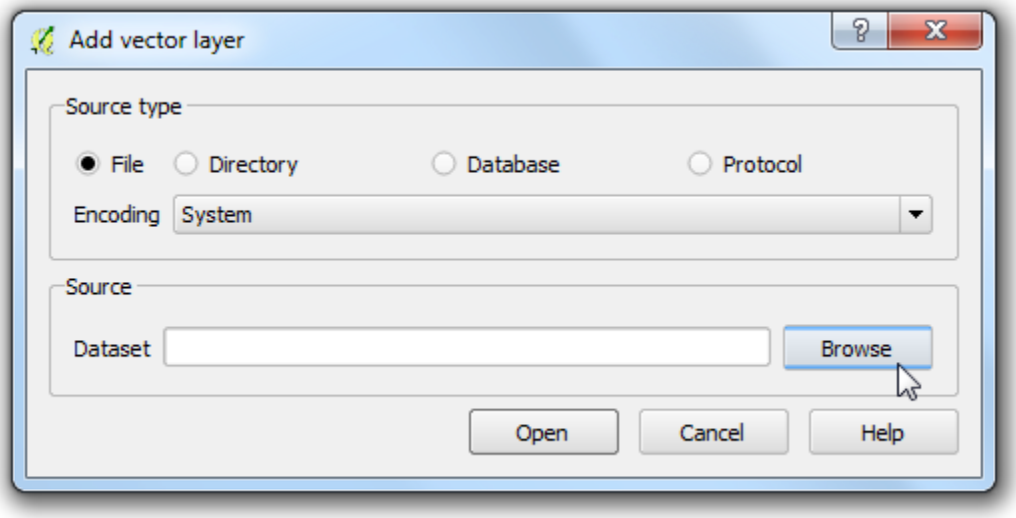
Πηγ■ δεδομ■νων[NATURALEARTH]_

Διαδικασ■α

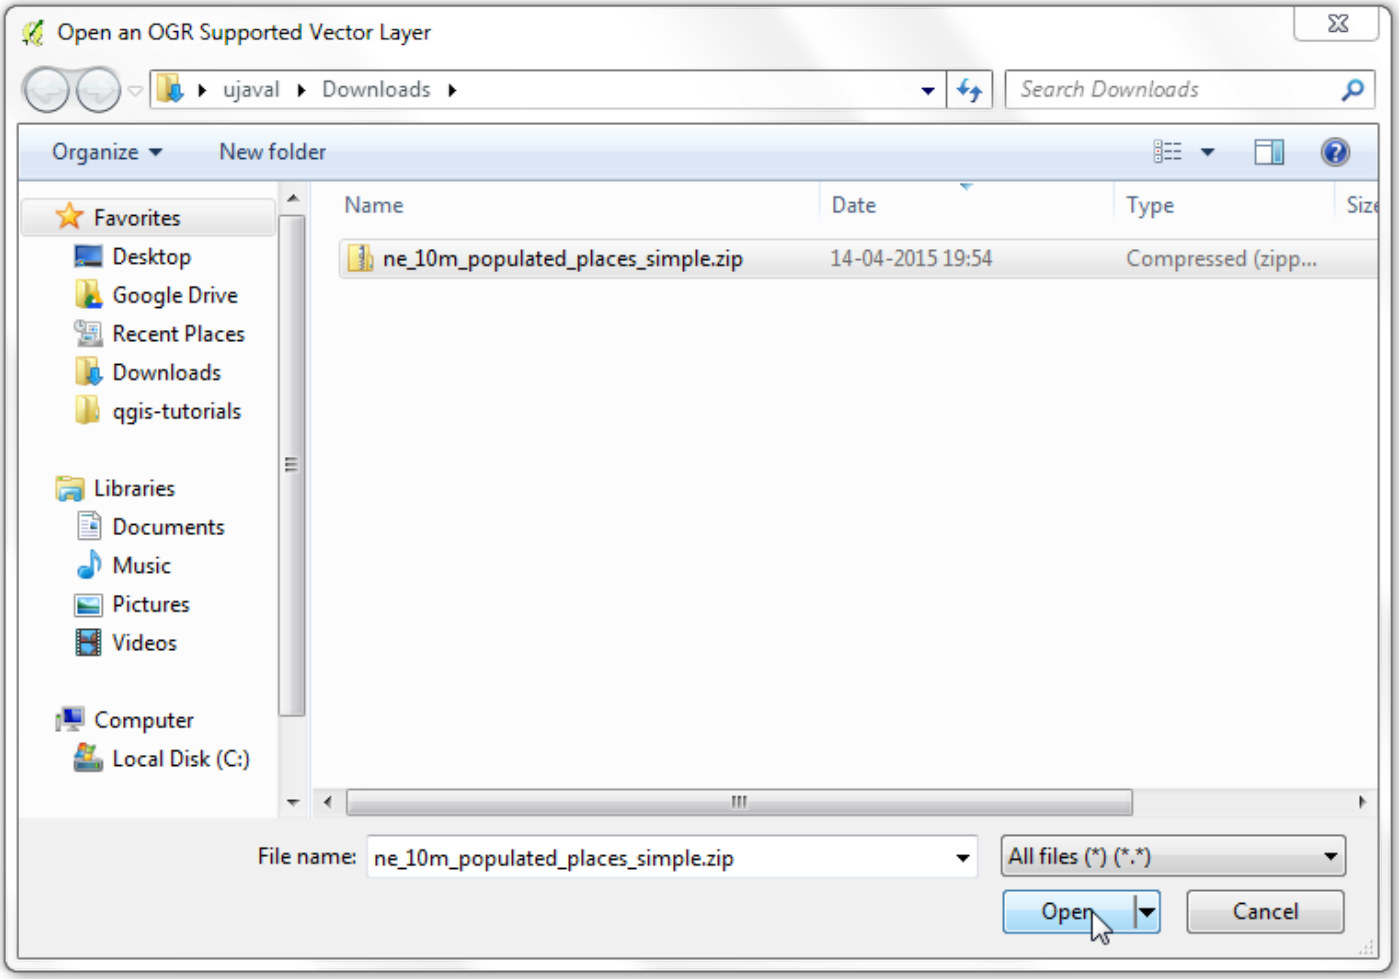
1. Once you have downloaded the data, open QGIS. Go to *Layer* ■ *Add Layer* ■ *Add Vector Layer*.



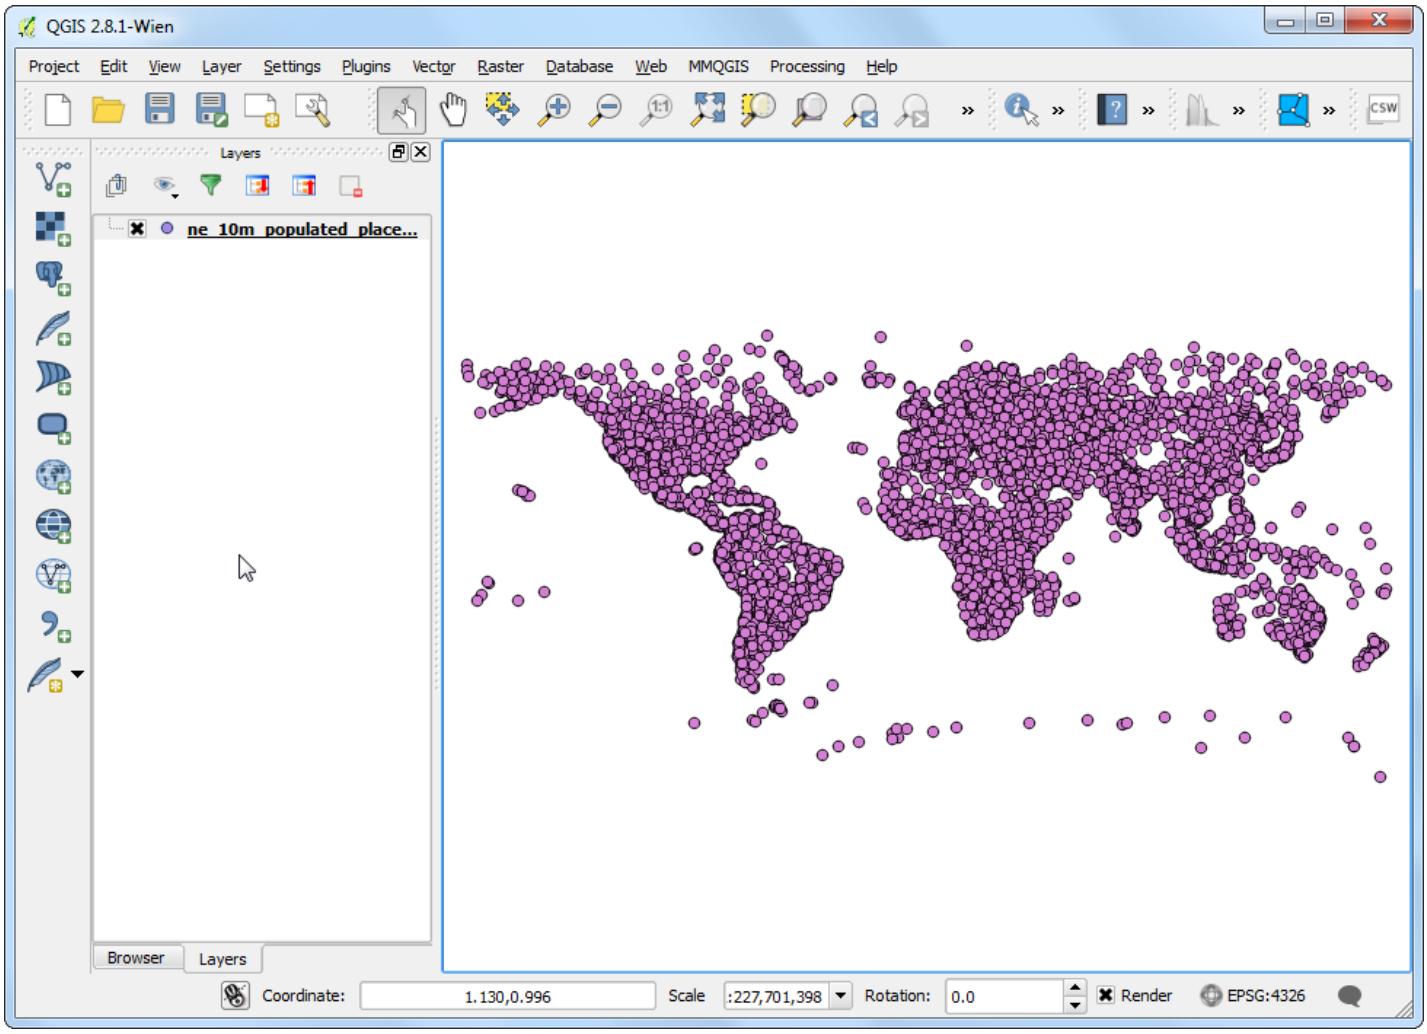
2. Κ■ντε κλικ στο *Browse* και μεταβε■τε στο φ■κελο ■που ■χετε κατεβ■σει τα δεδομ■να.



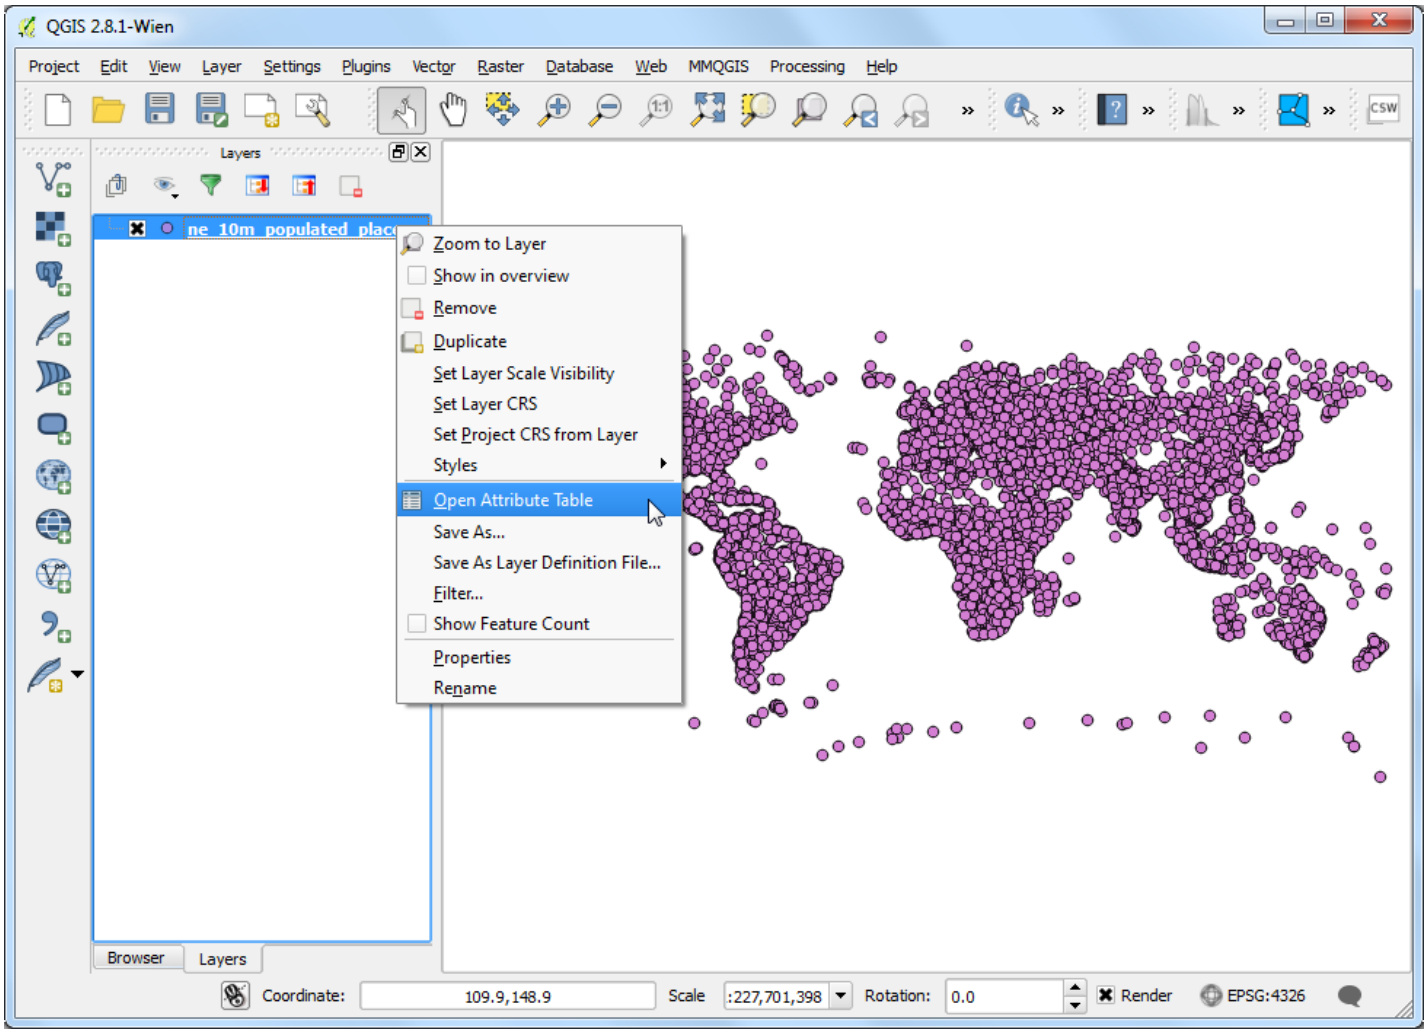
3. Εντοπ■στε το κατεβασμ■νο αρχε■ο zip *ne_10m_populated_places_simple.zip*. Δεν χρει■ζεται να αποσυμπι■σετε το αρχε■ο. Το QGIS ■χει τη δυνατ■τητα να διαβ■σει απευθε■ας τα αρχε■α zip. Επιλ■ξτε το αρχε■ο και κ■ντε κλικ στο κουμπ■ *Open*.



4. Η επιλεγμ■νη στρ■ση θα πρ■πει τ■ρα να τοποθετηθε■ στο QGIS και θα εμφανιστο■ν πολλ■ σημε■α που αντιπροσωπε■ουν τις κατοικημ■νες περιοχ■ς του κ■σμου.



5. Right-click the layer and select *Open Attribute Table*.



6. Εξερευν■στε τα δι■φορα χαρακτηριστικ■ και τις αξ■ες τους.

8. Now we are ready to perform our query on these attributes. QGIS uses SQL-like expressions to perform queries. Click *Select features using an expression*.

	longitude	changed	namediff	diffnote	pop_max	pop_min	pop_other

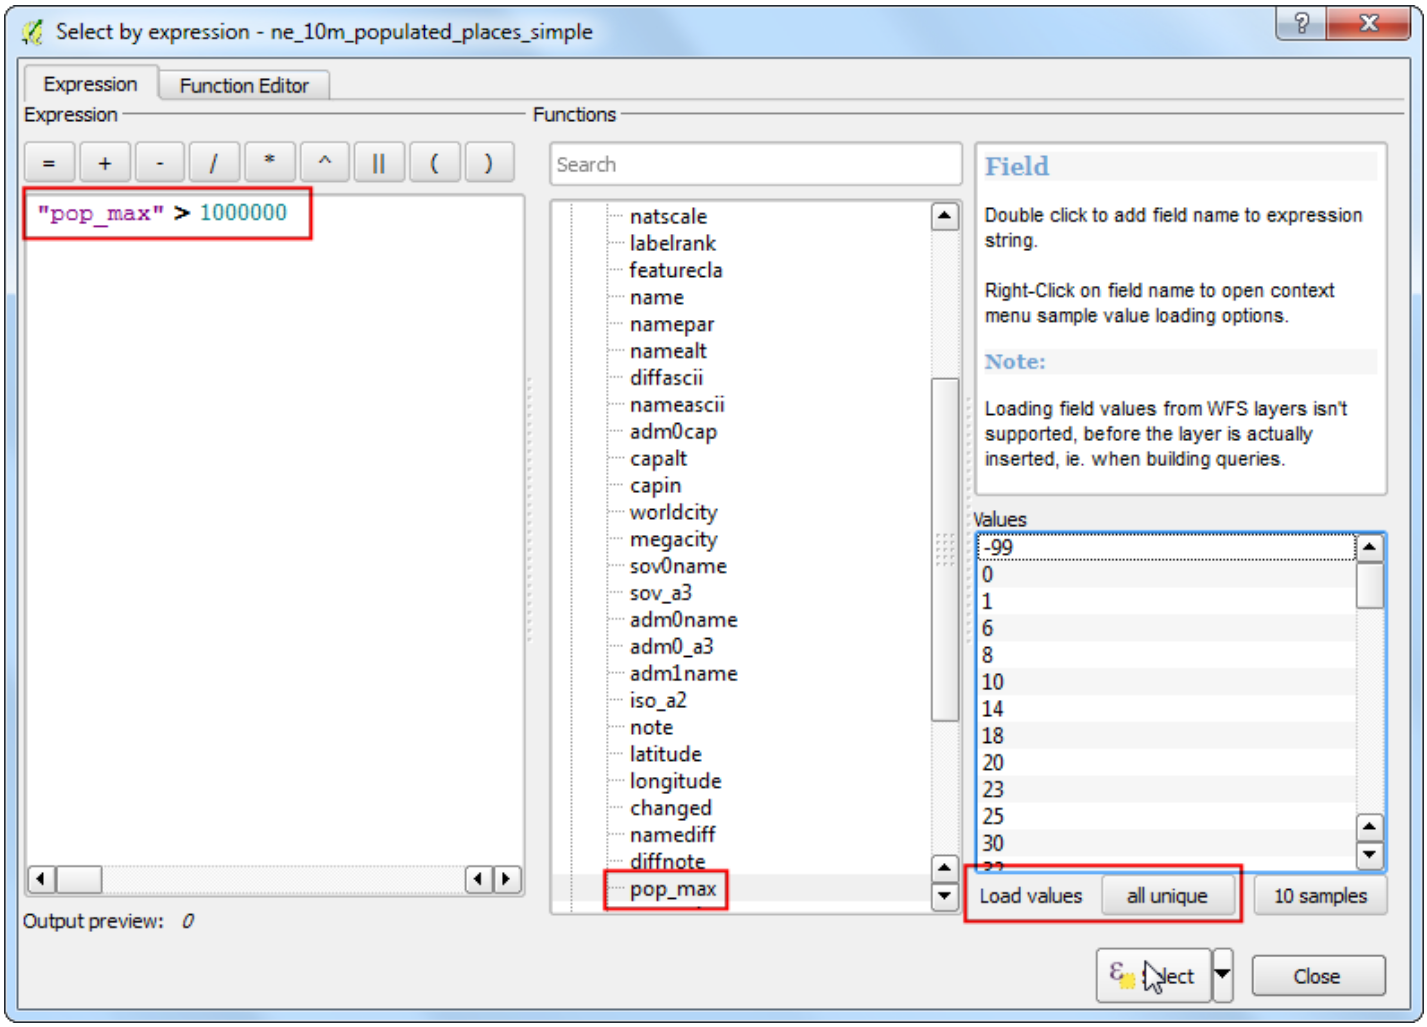
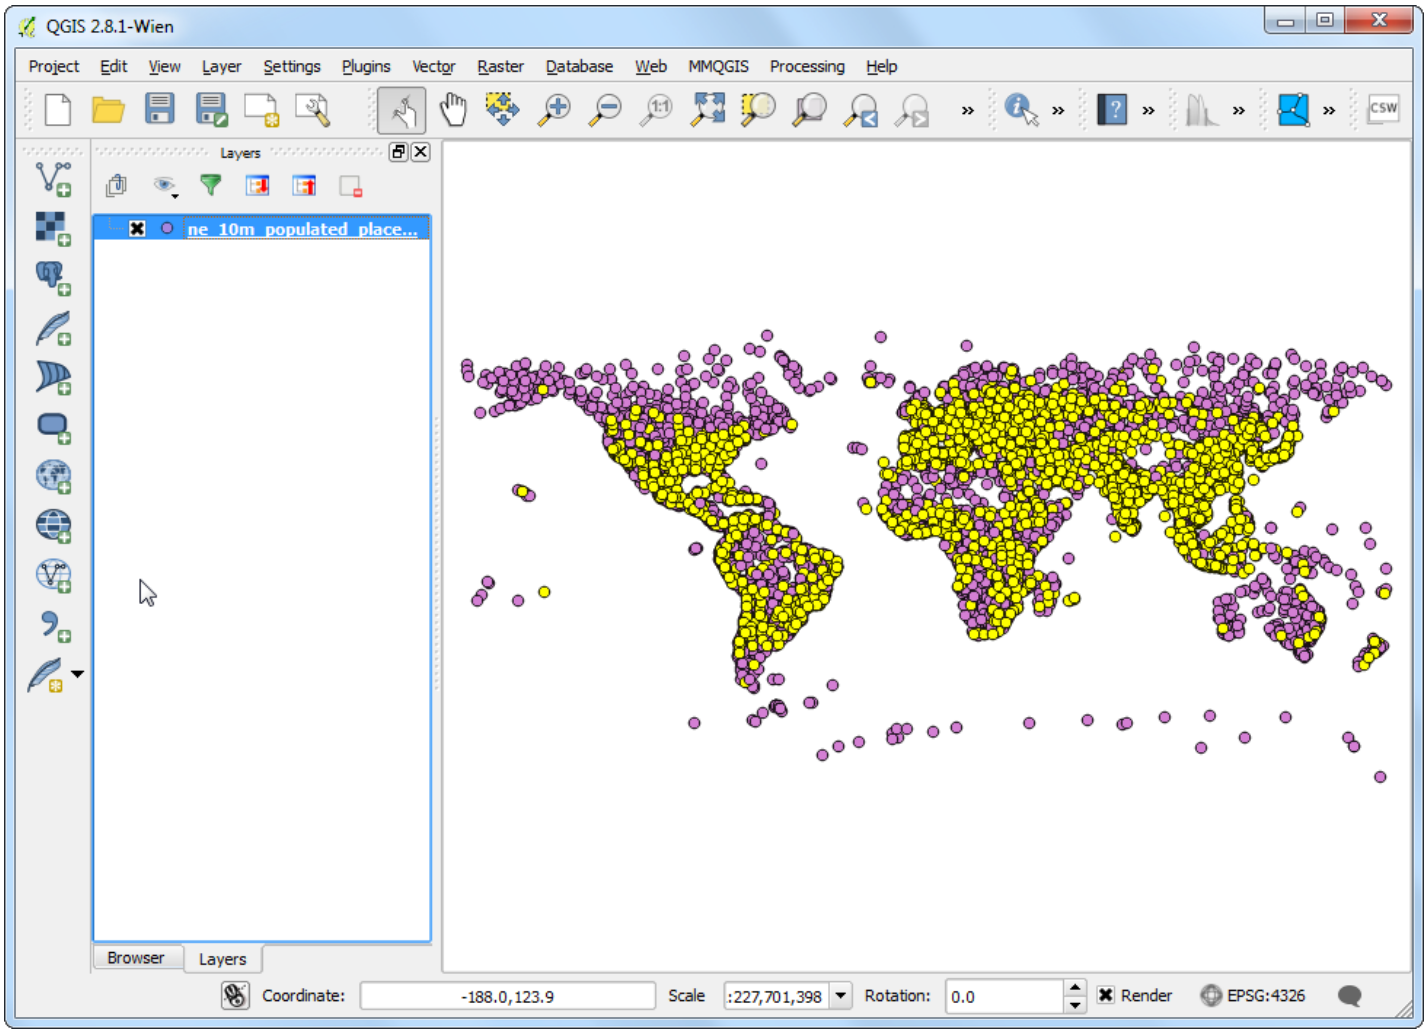
7302	37.61552282590	0.00000000000	0	NULL	10452000	10452000	1058538
7299	29.01000158560	0.00000000000	0	NULL	10061000	9945610	965148

9. In the *Select By Expression* window, expand the *Fields and Values* section and double-click the `pop_max` label. You will notice that it is added to the expression section at the bottom. If you aren't sure about the field values, you can click the *Load all unique values* to see what the attribute values are present in the dataset. For this exercise, we are looking to find all features that have a population greater than `1,000,000`. So complete the expression as below and click *Select*.

```
"pop_max" > 1000000
```

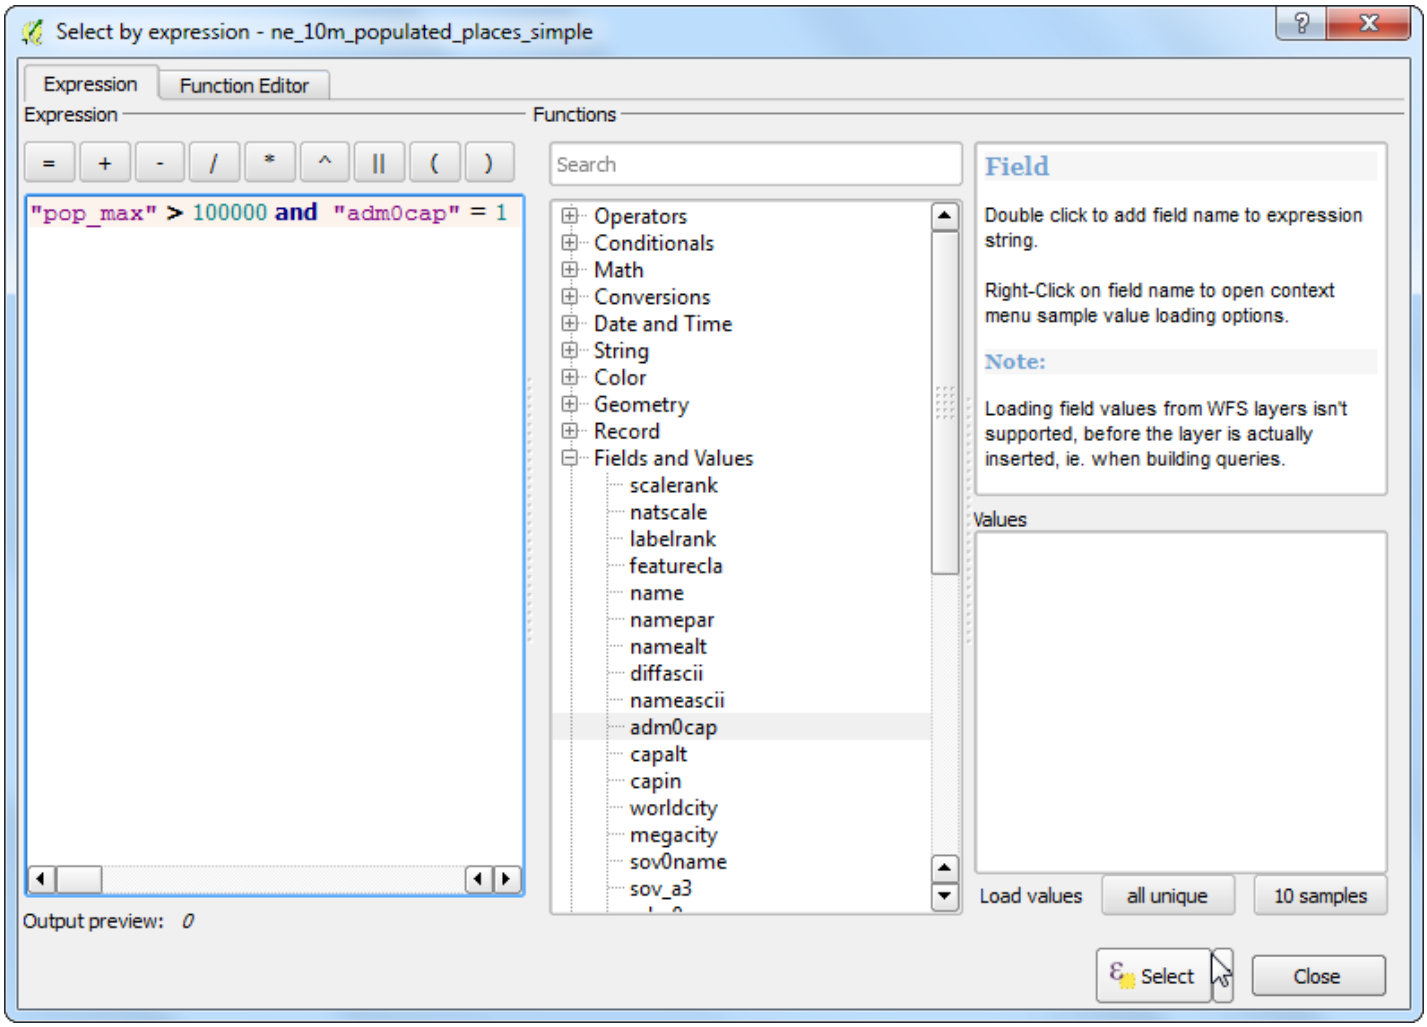


10. Click on *Close* and return to the main QGIS window. You will notice that a subset of points is now rendered in yellow. This is the result of our query and you are seeing all places from the dataset that have the `pop_max` attribute value greater than `1,000,000`.

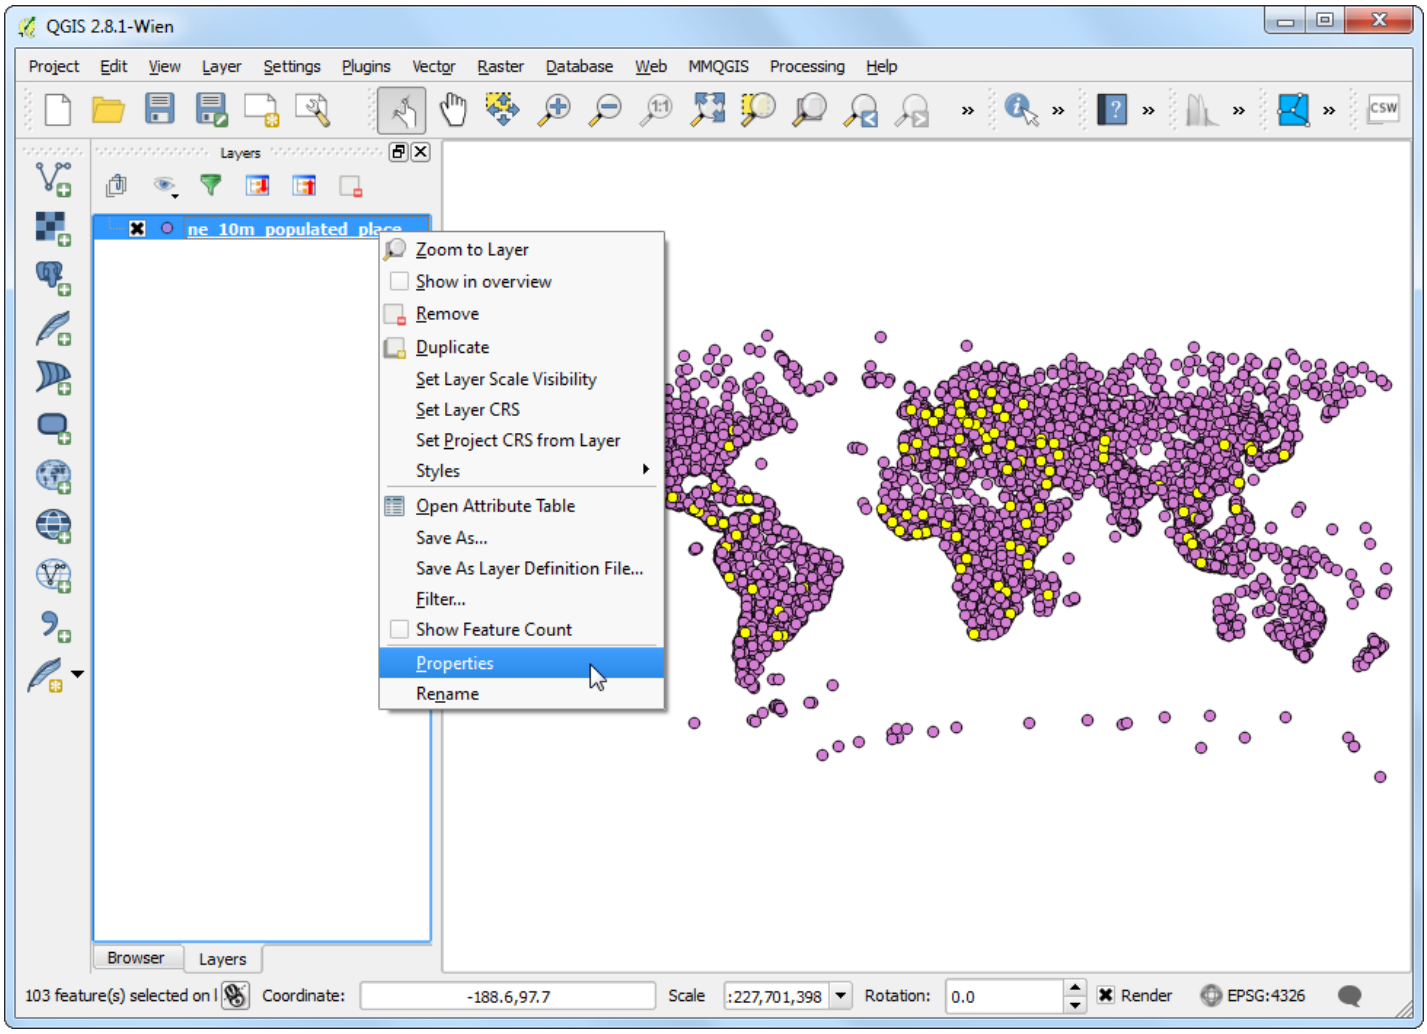


11. The goal for this exercise is to find the places that are country capitals. The field containing this data is *adm0cap*. The value `1` indicates that the place is a capital. We can add this criteria to our previous expression using the `and` operator. Let's refine our query to select only those places which are capitals. Click on the *Select feature using an expression* button in the attribute table and enter the expression as below and click *Select* and then *Close*.

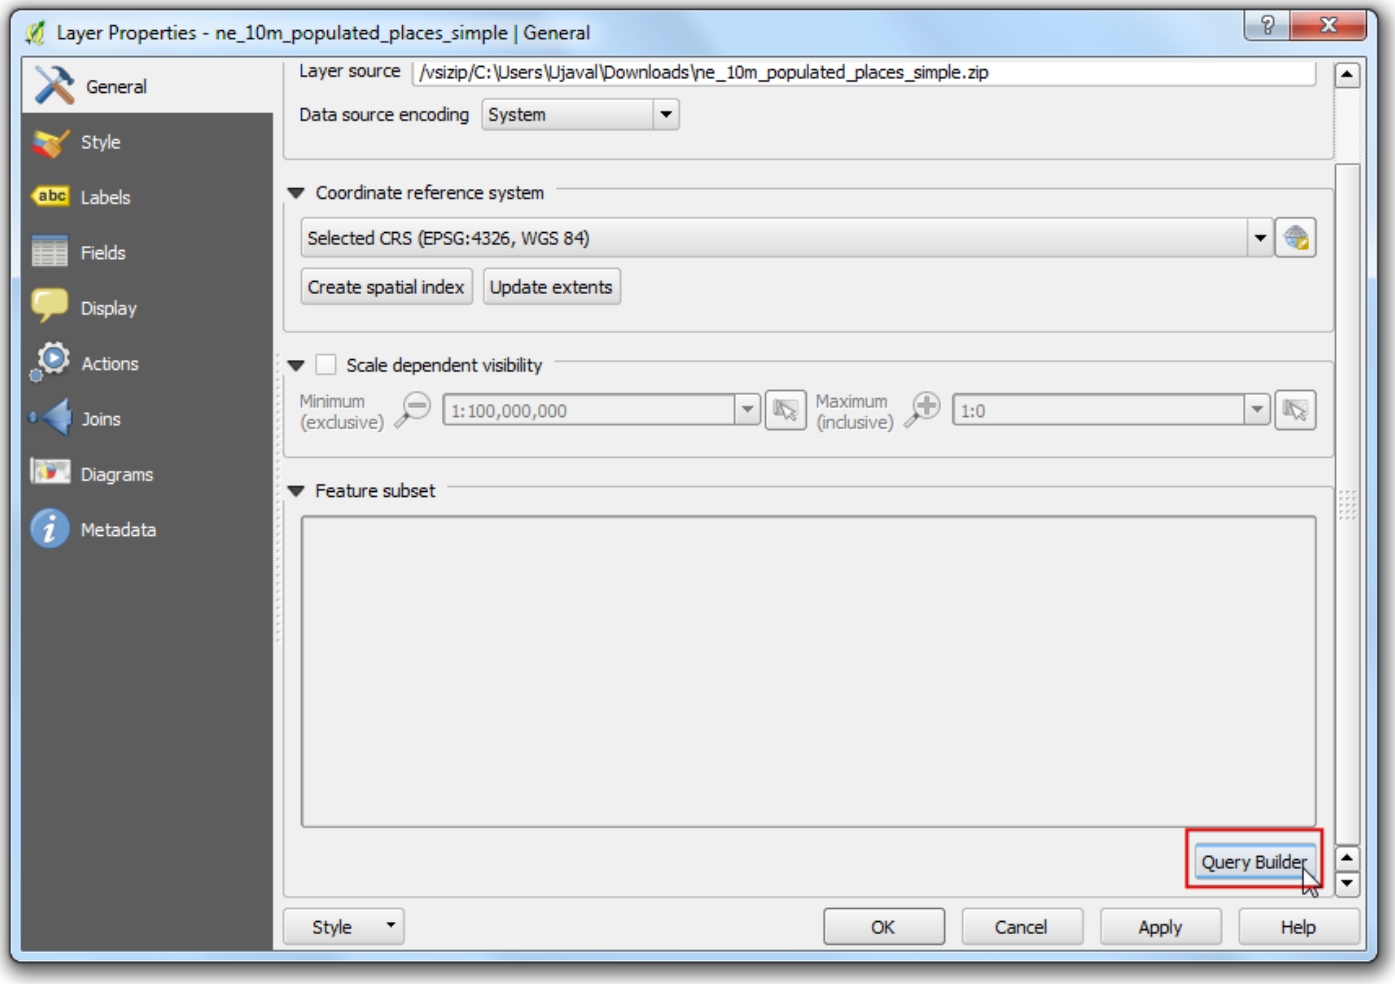
```
"pop_max" > 1000000 and "adm0cap" = 1
```



12. Return to the main QGIS window. Now you will see a smaller subset of the points selected. This is the result of the second query and shows all places from the dataset that are country capitals as well as have population greater than 1,000,000. If we wanted to do some further analysis on this subset of data, we can make this selection persistent. Right-click the `ne_10m_populated_places_simple` layer and select *Properties*.

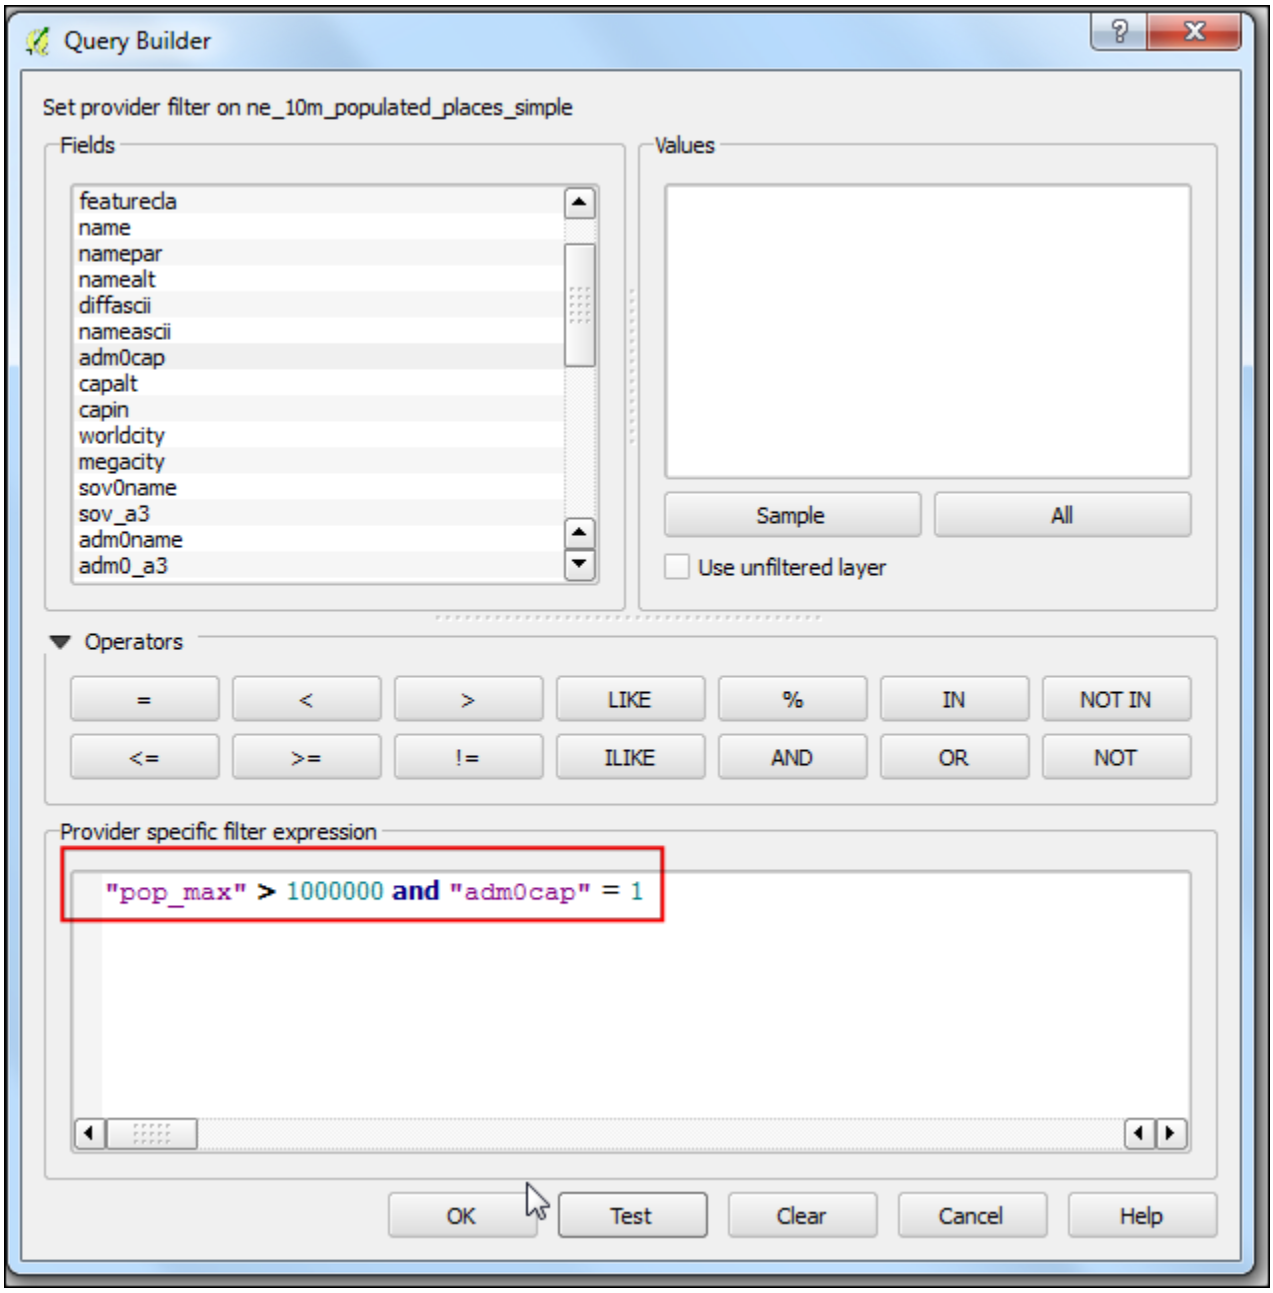


13. In the *General* tab, scroll down to the *Feature subset* section. Click *Query Builder*.

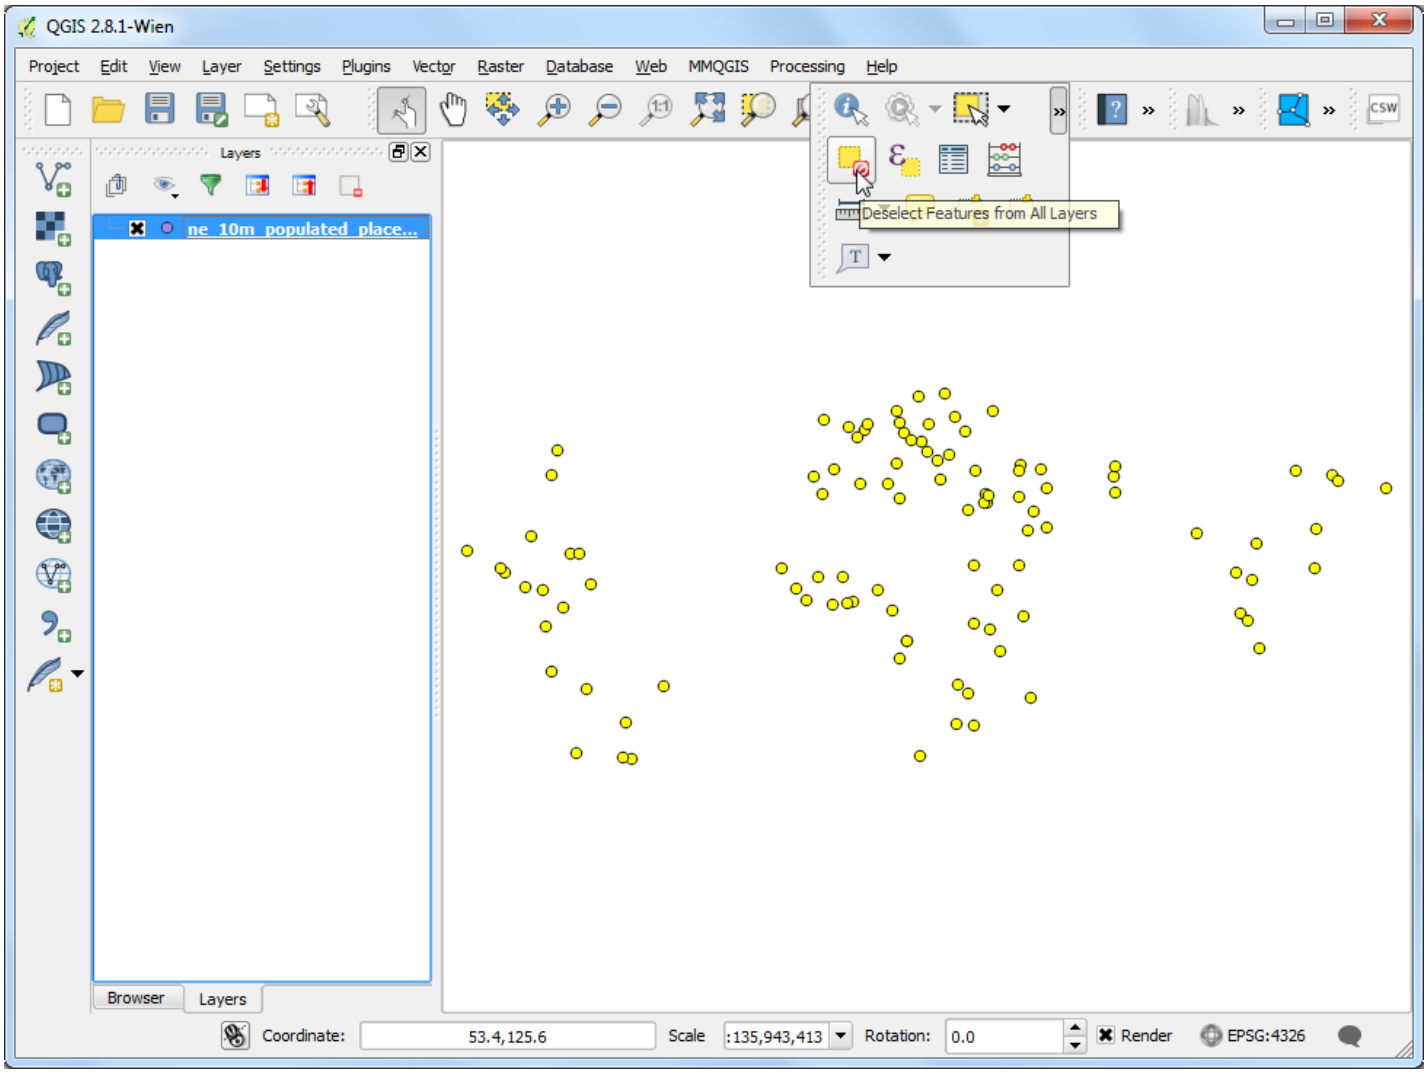


14. Enter the same expression you had entered earlier and click *OK*.

```
"pop_max" > 1000000 and "adm0cap" = 1
```



15. Back in the main QGIS window, you will see rest of the points disappear. You may now perform any other analysis on this layer and only the features that match our expression will be used. You will notice that the points still appear in yellow. This is because they are still selected. Find the *Deselect Features from All Layers* button under the *Attributes* toolbar and click on it.



16. You will see that the points are now de-selected and rendered in their original color.
