■■■■■■■■ shape-■■■■ Natural Earth Populated Places.

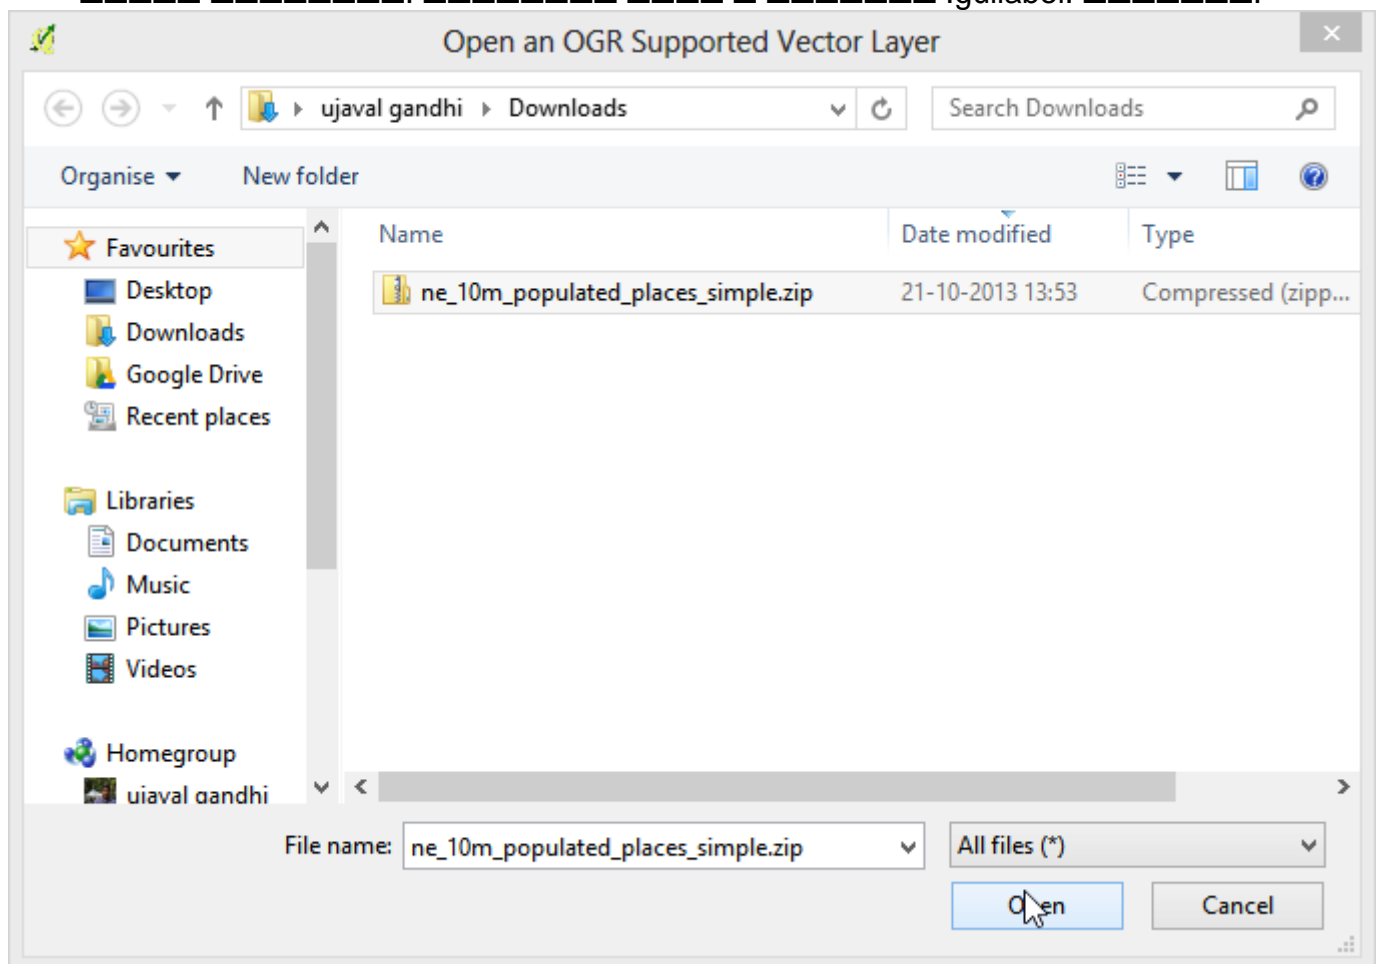

■■■■■■■■ ■■■■■■: [NATURALEARTH]

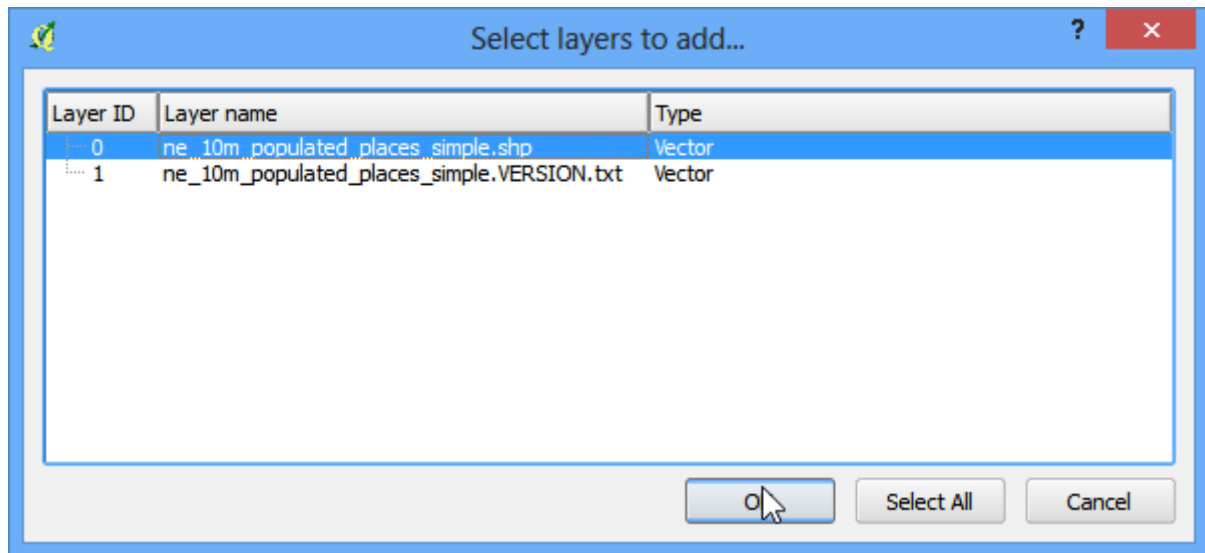

2. Click **Browse** button, then select the file.

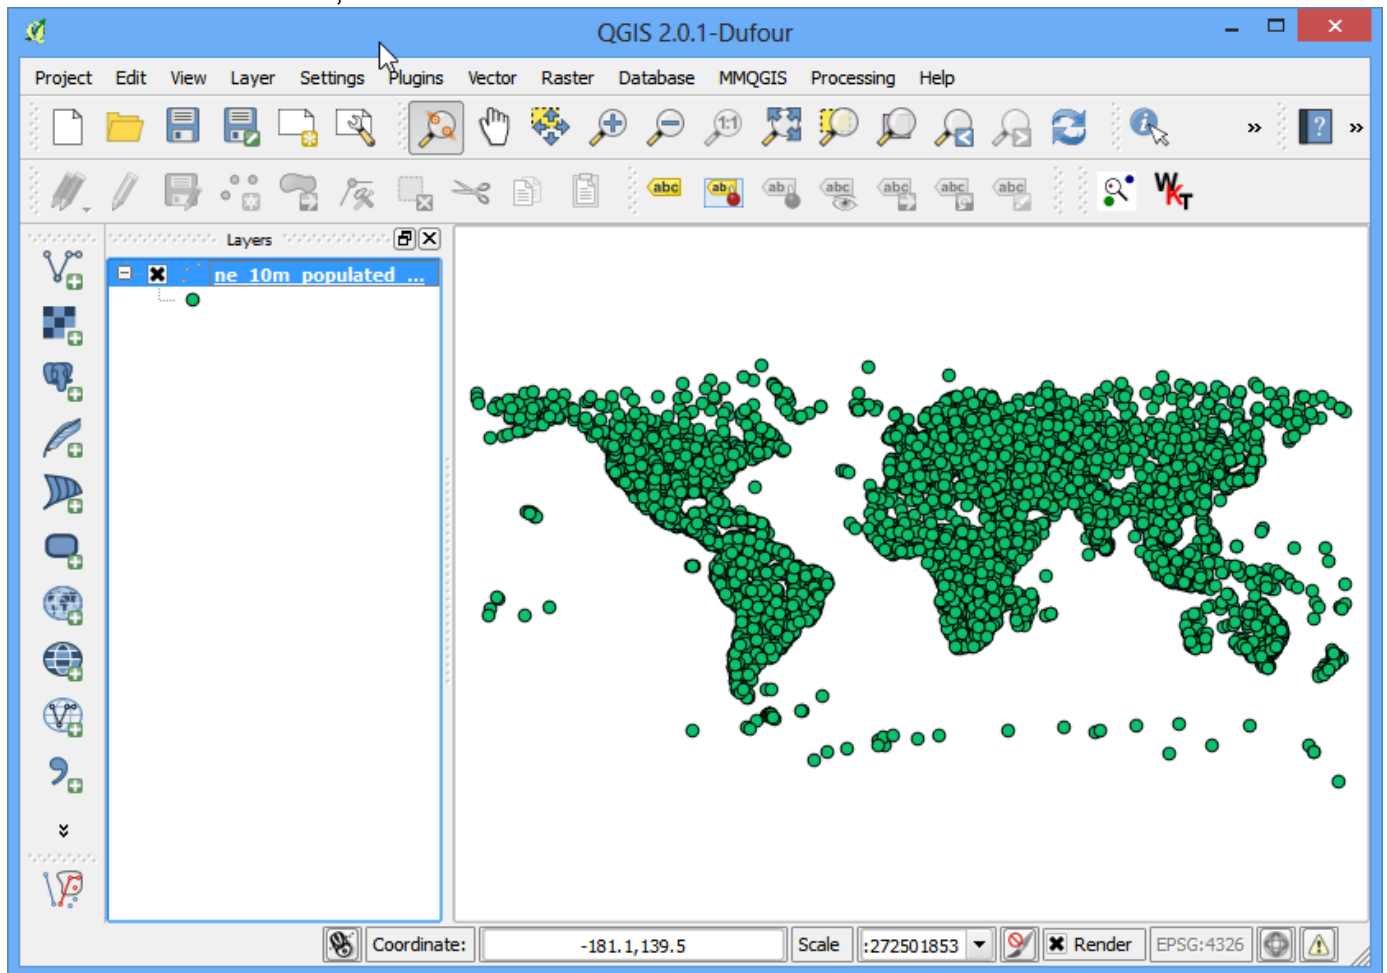

3. Select the file `ne_10m_populated_places_simple.zip`. QGIS will prompt you to open the file. Click **Open**.

4. Click **Open** button, then click **OK**.

5. In QGIS, the 'ne_10m_populated_places_simple.shp' layer is added to the project. The layer is named 'ne_10m_populated_places_simple' in the Layers panel.

6. The 'ne_10m_populated_places_simple' layer is styled with a green color and a size of 10 pixels. The layer is named 'ne_10m_populated_places_simple' in the Layers panel.

10. In the *Select By Expression* window, expand the *Fields and Values* section and double-click the *pop_max* label. You will notice that it is added to the expression section at the bottom. If you aren't sure about the field values, you can click the *Load all unique values* to see what the attribute values are present in the dataset. For this exercise, we are looking to find all features that have a population greater than 1,000,000. So complete the expression as *"pop_max" > 1000000* and click *Select*.

11. Click on *Close* and return to the main QGIS window. You will notice that a subset of points is now rendered in yellow. This is the result of our query and you are seeing all places from the dataset that have the *pop_max* attribute value greater than 1,000,000.

12. The goal for this exercise is to find the places that are country capitals. Let's refine our query to select only those places which are capitals. Click on the *Select feature using an expression* button in the attribute table.

13. The field containing this data is *adm0cap*. The value 1 indicates that the place is a capital. Enter the expression as "*adm0cap*" = 1. Since we want to search only within our previous query results, select *Select within selection*.

14. Click on *Close* and return to the main QGIS window. Now you will see a smaller subset of the points selected. This is the result of the second query and shows all places from the dataset that are country capitals as well as have population greater than 1,000,000.

16. Keep the format selection as *ESRI Shapefile* and enter the output name as *large_capital_cities.shp*. Check the box next to *Add saved file to map* and click *OK*.

17. The newly created shapefile will be automatically loaded into QGIS. Turn off the populated places layer by un-checking the box next to it. Now, you will see only the features from the newly created layer containing capital cities of the world that have population greater than 1,000,000.
