GIS 中 的 点 在 多 边 形 内 部 的 判 断 是 一 个 常 见 的 问 题 。 本 文 将 介 绍 一 种 简 便 的 判 断 方 法 ， 即 使 用 **Points-in-Polygon** 算 法 。 该 算 法 可 以 通 过 计 算 点 的 绕 行 角 度 来 判 断 点 是 否 在 多 边 形 内 部 。 这 种 方 法 在 GIS 中 有 着 广 泛 的 应 用 ， 例 如 在 地 理 信 息 系 统 中 进 行 空 间 分 析 和 数 据 处 理 时 。

1. □□ □□ --> □□□□ □□ □□ □□ □□ :menuselection: `Layer --> Add Delimited
Text Layer` □ □□ □□□□□ `signif.txt` □□□ □□□□.

2. Open the 'Add Delimited Text Layer' dialog box. In the 'File format' field, select 'Tab-delimited file'. In the 'X field' field, select the field containing the X coordinates. In the 'Y field' field, select the field containing the Y coordinates. Click the 'OK' button.

Note

The QGIS interface is designed to be user-friendly and intuitive. It includes a variety of tools and options to help you work with your data. The 'Add Delimited Text Layer' dialog box is a key component of the interface, allowing you to easily import data from a text file into a QGIS project.

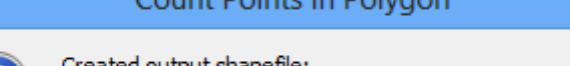

4. The earthquake point layer would now be loaded and displayed in QGIS. Let's also open the Countries layer. Go to Layer > Add Vector Layer. Browse to the downloaded *ne_10m_admin_0_countries.zip* file and click Open. Select the *ne_10m_admin_0_countries.shp* as the layer in the Select layers to add... dialog.

The screenshot shows the QGIS 2.0.1-Dufour interface. The 'Vector' menu is open, and the 'Analysis Tools' submenu is selected, with 'Points in polygon' highlighted. The map canvas displays a world map with yellow landmasses and cyan points. The 'Layers' panel on the left shows two layers: 'ne_10m_admin_0_count...' and 'signif'. The status bar at the bottom indicates the coordinate system is EPSG:4326.
