□ □ □ □ □ □ □ □ □ □

QGIS은 오픈 소스 지리정보시스템 소프트웨어로, 다양한 데이터 형식과 레이어를 처리할 수 있는 강력한 도구입니다. QGIS는 GIS 데이터를 시각화하고 분석하는 데 사용되며, 다양한 플랫폼에서 실행 가능합니다. QGIS는 GIS 분야에서 가장 인기 있는 소프트웨어 중 하나이며, 많은 전문가와 학생이 이를 사용하여 프로젝트를 수행합니다.

[illegible]

Natural Earth [Airports](#) □□□□ □□□□.

```
`Airports` shapefile <http://www.naturalearthdata.com/http://www.naturalearthdata.com/download/10m/cultural/ne\_10m\_airports.zip>`_ 00000 00000.
```

□□□ □□: [NATURALEARTH]

```
1. QGIS --> File --> Open --> ne_10m_airports.zip
Vector Layer --> Add
:guilabel: Open --> ne_10m_airports.shp
:guilabel: OK
```

2. QGIS `ne_10m_airports` 。

3. Identify the fields in the 'ne_10m_airports' layer. The fields are 'name' and 'iata_code'.

```
5. QGIS 0000 0000 0000 0000 0000 00 00 0000. 0000 000 0 00 0000
>>>`■ ■■ ■■■■■ ■■■ ■■■■. QGIS■■■ ■■■■■■■■ `iface 000 00000
000. QGIS00 00 0000 0000 0000 0000 000 00 00000 00
Enter`0 0000. 0 0000 00000 00 0000 0000 0000 0000 `layer` 000 00000.
```

```
layer = iface.activeLayer()
```

6. `dir()` returns a list of attributes and methods of the active layer. `layer` is the name of the active layer.

```
dir(layer)
```

7. `getFeatures()` returns a list of features. Each feature is a dictionary with keys for the feature's attributes and values for the feature's geometry. The list of features is returned as a list of dictionaries.

```

for f in layer.getFeatures():
    print f

```

8. `for f in layer.getFeatures():`
 `print f['name'], f['iata_code']`

```

for f in layer.getFeatures():
    print f['name'], f['iata_code']

```

```

    geom = f.geometry()
    print geom.asPoint()

```

```

for f in layer.getFeatures():
    geom = f.geometry()
    print geom.asPoint()

```

10. `for f in layer.getFeatures():`
`geom = f.geometry()`
`print geom.asPoint().x()`

```

for f in layer.getFeatures():
    geom = f.geometry()
    print geom.asPoint().x()

```

11. `for f in layer.getFeatures():`
`geom = f.geometry()`
`print '%s, %s, %f, %f' % (f['name'], f['iata_code'],`
`geom.asPoint().y(), geom.asPoint().x())`

```

for f in layer.getFeatures():
    geom = f.geometry()
    print '%s, %s, %f, %f' % (f['name'], f['iata_code'],
        geom.asPoint().y(), geom.asPoint().x())

```
