QGIS is a free and open-source geographic information system (GIS) for desktop computers. It is a powerful tool for working with spatial data. One of the many plugins available for QGIS is the **Vertices Counter** plugin. This plugin is used to count the number of vertices in a geometry.

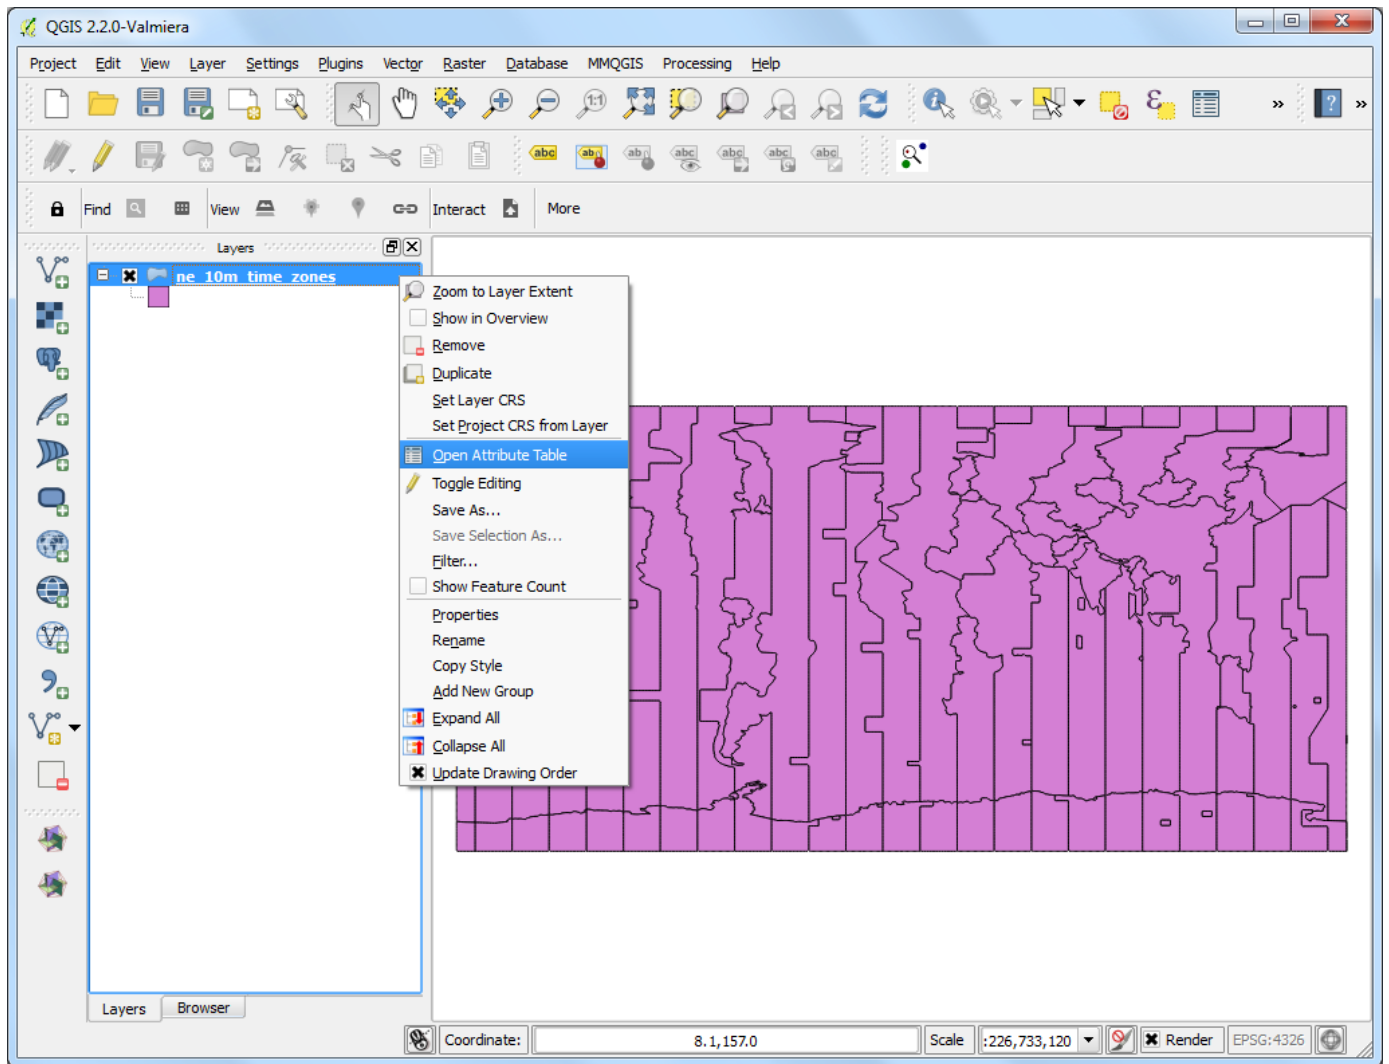

1. To install the **Vertices Counter** plugin in QGIS, follow these steps:

2. After installing the plugin, you can use it to count the vertices in a geometry. To do this, select the geometry in the Layers panel, then click on the **Vector** menu and select **Count Vertices**.

4. **Click on the 'Count Vertices' button in the 'Counter' tab of the 'Vertices Counter' plugin. This will calculate the number of vertices for each feature in the selected layer and add a new column named 'Vertices' to the attribute table. The total number of vertices for all features is displayed on the right side of the interface.**

5. **Vertices** **vertex**, **Select** **> X**.

Attribute table - ne_10m_time_zones :: Features total: 120, filtered: 120, selected: 0
